

# NEW Limited Edition Professional Water Colours Inspired by The Australian Outback

---

Winsor & Newton are proud to introduce six exceptional and unique colours to the Professional Water Colour range that encapsulates the dramatic and intense colour palette of the deserts around the world.

## **Phthalo Sapphire**

"A truly stunning, sophisticated, bright and crisp phthalo. Gorgeous transparency-strong and clean"

Phthalo Sapphire is an intense, vivid and deep blue. Outstanding when applied at full strength for brilliant and cloudless desert skies. Equally beautiful when mixed with other colours thanks to its high transparency. Try mixing with the new Dark Brown to create dark, intense shadows. Phthalo Sapphire becomes even more dramatic when juxtaposed with its complimentary Transparent Orange.

## **Transparent Orange**

Transparent Orange is a vibrant, strong and lively orange veering easily between a primary and an earth colour. Extremely bright and intense, this clear, red-leaning orange is like the blazing hot desert sun at midday. Both its masstone and undertone are beautifully appealing yet very different, providing strong reds when used thickly with little water and turning orange when thinned.

## **Indian Red Deep**

A dark and deliciously rich maroon-brown. Excellent for depicting the deep red earth of the Australian outback. Light to handle and highly transparent, it is also an exquisite mixing colour. Try mixing with Transparent Orange to create beautiful, deep reds. Can be equally exciting when mixed with blues, violets and all warm colours.

## **Yellow Titanate**

Yellow Titanate is a rich, exceptionally lightfast, strong yet subtle yellow. Earthy and warm – it is perfect for representing the sandy hues of the desert dunes. Its opacity makes it dense and sturdy, retaining its glowing character from full strength to subtle tints. A granulating pigment, it can also create beautiful textures and subtleties in the landscape.

## **Gold Brown**

Gold Brown is a musky and mellow, yellow-gold brown. Intensely opaque, it is perfect for depicting the heavy, dense desert landscape. Subtle and smooth, it is also a great mixing colour. Combine it with the new Dark Brown and Indian Red Deep to create deep and dark shadows and mixtures.

## **Dark Brown**

Soft, earthy and natural, Dark Brown has a sun-beaten yet smooth and silky appearance. Opaque and dense, it is excellent for deep, chocolatey, long desert shadows found at the last light of day. Another great mixing colour, mix with the new Phthalo Sapphire to create even richer and deeper darks.
